- Aimed for a clean look so it's easy to use.l.

- Chose chill colors and the Arial font 'cause it's clear.

- Added some neat hover effects for a bit of fun.

- Organized stuff into sections so you can find things quick.

- Made sure you can read everything easily.

- added animations to make the website more enjoyed to use

-including sound to add more functionality to a html and css website

Why I chose this approach

- Wanted to keep things simple and let the content shine.

- Built it up step by step, improving as I went along.

- Used reusable bits to save time later.

- Made sure the site loads fast 'cause waiting's a bummer.

- Thought about future updates to keep it flexible.

- wanted to add a smoke drop effect to make the effect more cooler

-added a ton of pictures so users can visualar each character of the film

-added a quiz to test users knowledge to see if they really know the film

- Tidied up the code in the end for easy updates.

using GitHub Projects:

- Broke down the work into tasks like setting up the header and footer.

- Noted down every design change and why.

- Added tasks for new features and making sure it's mobile-friendly.

- Tested a lot to catch any issues.

- Made sure the code's clean and ready for whatever's next.
